SUMMARY

His first foray into the world of programming and development started as a pre-teen hobby. Having access to a new computer back then, it was just a 256KB memory, without harddisk, mouseless AT processor 10kg machine. Nevertheless, he discovered the BASIC & BASICA language and toyed around with the setup.

From then on it was a joyful ride into the forest of programming. Even though his pure science degree and initial engineering job are not directly related to programming, the passion never stopped.

This special interest has been noticed and thus brought upon an exciting change into the portfolio of his job scopes, gaining further experiences and insights that strengthened his foundations in software development and systems consultancy.

Being a person who loves to learn new things, he also likes to share his knowledge to the masses. Once in a while, he gets invited to train interested parties who want to have a quick guide into the various technologies and syntax of programming languages.

SKILLS

Python

Java

Kotlin

.NET Framework

C#

VB.NET

ASP.NET

Javascript

Jinja

MSSQL

MySQL

MongoDB

EXPERIENCES

Solutions Architect

In charge of the consulting, analysis, design, planning, prototyping of a control system used in a Medical institution.

Chief Developer

In charge of the consulting, analysis, design, development, management, integration of a batch of customised thermal imaging hardware system.

Senior Administrator

In charge of the design, planning, prototyping, development, management, maintenance of an ERP system with above 100 users.

Senior Lead Developer

In charge of the prototyping, development, testing, deployment, commissioning of a suite of industrial automation systems.
